

VITALeTC™

KbPort™

The Vital Solution

Medical professionals need to be able to react quickly and make educated decisions based on the information at hand. Your simulation lab will prepare students for this type of scenario with the help of the Vital ETC. Instructors can now capture real-time events, video and audio from your low and mid-fidelity simulators wirelessly. The Vital ETC allows instant access to your digital videos and event logs. Place the system on your network and view it live from a classroom or access it at a later time for debriefing.

Kb Port's Vital ETCTM system is now compatible with VitalSim® and SimPad® systems.* Eliminate the need to import event data logs and capture them in real-time directly to your Kb Port Vital ETC. Debriefing for ALS simulators is made easy and can be done virtually anywhere. Stream to classrooms and debriefing rooms in real time.

VC-400 HD Camera

Standard Components

- Vital ETC recording and debriefing system
- VC-400 Digital USB Camera with internal microphone and flexible camera clamp
- Wireless adapter
- Simulation control pad is customer provided

Vital ETC Features

- Real time event log capture for digital debriefing. No more downloading events after the scenario ends
- All automatic and manual functions are captured digitally to the Vital ETC for debriefing
- Ability to add comments and edit the event log after the recording has stopped
- Vital ETC enables instructor to give instant guidance to student at patient bedside
- Works with most low to mid fidelity simulators (call for specific models)
- Lightweight and extremely easy to use
- Perfect for a customer on a low budget
- Networkable

Vital ETC Recorder
