

The OpCam records the first person point of view. See exactly what students are seeing with this headband camera and capture what other cameras miss. The simple set up allows users to quickly start recording training sessions. Its wireless capabilities allow users to access live footage and review stored videos over the network. Users can also add it as a satellite input to their ETC providing up-close, detailed video. Whether the student is learning how to perform a Tracheostomy or providing simple wound care, the OpCam provides instructors with a detailed image necessary for successful debriefing.

## Headband

- The adjustable headband allows for the perfect fit for any size head
- The adjustable hinge provides numerous angles for recording

## Recorder

- Multi-touch display
- Thin pad style design is light weight
- Easily attached to scrubs or belt using provided clip
